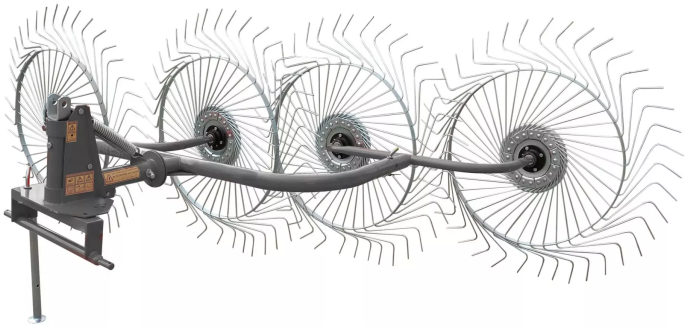
4 Disk Finger Rake

ARF-40

Built for efficient forage handling and consistent windrow formation, the Revaro Mounted Finger Rake is a reliable solution for haymaking operations. Designed to move, turn, and gather previously cut forage, this rake helps improve drying time and ensures clean, uniform windrows ready for baling. The finger wheel system gently lifts and handles the crop, reducing leaf loss and maintaining feed quality. Mounted on a standard tractor three-point linkage, the Revaro Finger Rake offers simple operation and dependable performance across a variety of field conditions, including uneven or rough terrain. With multiple drum configurations available, it can be matched to different farm sizes and productivity requirements. Efficient, durable, and easy to use - this is a practical solution for farmers looking to streamline their haymaking process and maximize crop quality.



Specs
